

Strategic Business Model Transformation

Techno Club Case Study

Transitioning from Shared Area & Student Traffic to High-Value B2B Corporate, Teams, and Instructors Model.

Data-Driven Spatial Overhaul

Zero-Seasonality B2B Model

Maximizing Square Footage ROI

Techno Club Case Study

High Seasonality Risk

Huge income during exams, followed by a total summer crash.

High Depreciation

Crowded student traffic caused heavy utility bills and furniture damage.

Low Profit Margins

High daily operational costs from casual walk-ins with very low net returns.

The 2-Room Trap

Operating with only 2 generic rooms made the business highly exposed to losses.

The Challenge: Unsegmented Volatility

Data Audits

Analysis proved private rooms yield much higher and more stable margins than shared areas.

Spatial Redesign

Doubled the capacity by shifting from 2 unoptimized rooms to 4 premium private structured rooms.

High Seasonality Risk

Switched marketing and messaging to target Startups, Work Teams, and Corporate Instructors.

Predictable Cash Flow

Moved users to upfront monthly contracts to cover fixed workspace costs before the month starts.

The Strategic Pivot

Measurable Results

Techno Club Case Study

✓ Optimized Room Revenue

Reached a continuous growth trajectory through 4-room capacity management.

✓ Maximized Net Profit Ceiling

Scaled past historical seasonal records, hitting an all-time high profit surplus.

✓ Drastic OpEx Reduction

Minimized monthly operational expenses and furniture damage due to professional client behavior.
